

LASA Safety & Quality Management System

The system backed by the age services industry.

Give your business the edge with a quality system you can trust.

Fast-track your readiness for the new Aged Care Quality Standards and benefit from free updates to manage your compliance long-term with LASA's Safety & Quality Management System.

Whether it's updates to the new Standards or to legislation—especially following the Royal Commission—you'll never have to worry about being left behind.

With everything on the cloud, your staff can access the same process and policy information from any Internet-enabled device— and version control will be a thing of the past.

Compatible with other systems, foreign-language enabled and built on award-winning technology, this is a one-stop-shop solution you can rely on.

LASA's quality system can be deployed within one business day after purchase, with back up support available from a team of consultants.

By taking the guesswork out of compliance, you'll have the time to take control of your business, maximise staff performance, and drive the cultural change you seek.
